**APPENDIX G2:  
Listing of Non-Subject Deviations**

| Study Site              | Deviation Number | Deviation  | Deviation Category            | Reason for Deviation                                      | Deviation Affected Product Stability? | Deviation Resolution  |
|-------------------------|------------------|--|-------------------------------|---|---------------------------------------|---|
| Vaccine Research Center | 1                | Other: Personal Identifying Information disclosure | Protocol procedure/assessment | Other:Medical Secure Email Information Technology Problem | No                                    | Email packet deleted, Effected subjects contacted, Information Technology dept. investigation ongoing, team will not use this system for group blind cc email distribution in future. |
| Emory Children's Center | 1                | Study product temperature excursion                | Protocol procedure/assessment | Other:EUC -80 freezer had a malfunction.                  | Yes                                   | A new -80 freezer has been purchased and in use.  |

| Study Site              | Deviation Number | Comments  |
|-------------------------|------------------|---|
| Vaccine Research Center | 1                | We are reporting an Unanticipated Problem of inadvertent disclosure of study participation by one subject to other study subjects via email. The UP occurred after a medically secured email sent by a study team member was used in “reply all” fashion and four trial participants inadvertently disclosed their names and email addresses to each other on June 11th, 2020. We are reporting this event as a UP because it was unexpected, related to study participation, and is a potential social risk to participants in that others became aware that they screened for a research study. We do not believe any actual material harm has occurred for participants due to this disclosure. DMID 20-0003 study participants were blind carbon copied (BCC) on a study status update email sent through a medically secure email server operated by the NIH Clinical Center. Prior to sending the email, the study team sought confirmation with the NIH Medical Records Department that this was an appropriate means of communication and would not result in disclosure of study participant’s identification. The Medical Records Department confirmed that this email would not provide study participants with access to others’ identification. Due to an IT glitch, however, a participant who screened but did not ultimately enroll in the study replied all to the email thread and included his name and information about his screening status. This email was then seen by 9 other participants on study. No other information including medical history were disclosed. Two other subjects who screened for the study and 1 who enrolled replied to the email thread indicated they believed they were included on the message in error. Their names were also disclosed as having screened for the study, however, no other information including medical history were disclosed. All subjects whose names were disclosed and who opened the email have been notified of the event and that we are reporting the event as an Unanticipated Problem. |
| Emory Children's Center | 1                | The affected study product was immediately removed from EUC -80 freezer to EUH -80 freezer on April 17, 2020. The excursion was reported to DMID on April 18, 2020. DMID instructed to continue to use IP.  |

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

**APPENDIX H:  
Listing of Pregnancies**

**Table 1 – Maternal Information**

**No maternal information has been reported**

**Table 2 – Gravida and Para**

**No gravida and para have been reported.**

**Table 3 – Live Birth Outcomes**

**No live birth outcomes have been reported**

**Table 4 – Still Birth Outcomes**

**No still birth outcomes have been reported**

**Table 5 – Spontaneous, Elective, or Therapeutic Abortion Outcomes**

**No spontaneous, elective, or therapeutic abortion outcomes have been reported**
