

**CLINICAL RESEARCH IN INFECTIOUS DISEASES**

**SAFETY SUMMARY REPORT**

**Prepared for DMID Protocol 20-0003:**

**Phase I, Open-Label, Dose-Ranging Study of the Safety and  
Immunogenicity of 2019-nCoV Vaccine (mRNA-1273) in Healthy  
Adults**

**26 OCTOBER 2020**

Prepared and distributed by:

### **Notes on this Report**

The following notes are provided for clarification of the data included in this safety report:

- Study accrual and vaccinations are complete at the time of this report.
- Data entry, querying, and monitoring are in progress at the time of the report. The data are neither clean nor complete.
- At the time of the data cutoff for this report, 07 October 2020, there were no SAEs reported.
- Appendices are presented in a separate file named:  
[20-0003\\_Safety\\_Summary\\_Report\\_OCT2020\\_appendices.pdf](#).

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

## **SAFETY SUMMARY REPORT**

### **DMID Protocol 20-0003**

Phase I, Open-Label, Dose-Ranging Study of the Safety and Immunogenicity of 2019-nCoV Vaccine (mRNA-1273) in Healthy Adults

#### **1. SUMMARY**

DMID Protocol 20-0003 is examining the safety and immunogenicity of a SARS-CoV-2 vaccine (mRNA-1273 manufactured by ModernaTX, Inc.), for the prevention of 2019-nCoV (SARS-CoV-2) infection. Males and non-pregnant females, 18-55, 56-70, and  $\geq 71$  years old, inclusive, who are in good health and meet all eligibility criteria will receive 2 doses (Days 1 and 29) of mRNA-1273 at 25  $\mu\text{g}$ , 50  $\mu\text{g}$ , 100  $\mu\text{g}$  or 250  $\mu\text{g}$ .

As of the data cutoff date of October 7, 2020, a total of 120 subjects had been enrolled into this study, and vaccination records had been submitted for all 120 subjects for the first dose of vaccine; 116 of these 120 subjects had received the second dose of vaccine; four subjects were discontinued from further vaccinations following their first dose (3 due to AEs and one due to potential COVID-19 exposure). The safety data presented in this report focus on both solicited and unsolicited events experienced by subjects following vaccination and entered in the study database as of the data cutoff date for this report.

#### **2. PURPOSE OF THE REPORT**

This report provides an interim update on the study of 120 subjects enrolled and vaccinated with a data cutoff of October 7, 2020.

#### **3. REVIEW OF THE STUDY DESIGN**

This is a Phase 1, dose-ranging, open-label, sequential study comparing the immunogenicity and safety of SARS-CoV-2 mRNA-1273 vaccine in subjects receiving 2 doses (Days 1 and 29) at 25  $\mu\text{g}$ , 50  $\mu\text{g}$ , 100  $\mu\text{g}$  and 250  $\mu\text{g}$ .

Potential subjects will be screened by medical history, physical exam, vital signs, and clinical laboratory tests including white blood cells (WBC), hemoglobin (Hgb), platelet count, total bilirubin, alanine aminotransferase (ALT), Aspartate aminotransferase (AST), serum lipase, Alkaline Phosphatase (ALP), Prothrombin time (PT), Partial thromboplastin time (PTT), and creatinine (Cr). Height and weight will be obtained to calculate BMI. Urine will be collected for drug screening. Potential female subjects of childbearing potential will have a serum pregnancy test. In addition, potential subjects will be screened for HIV 1 and 2 antibody, Hepatitis C antibody, and Hepatitis B surface antigen prior to study product administration.

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

For this report 120 subjects were enrolled into one of ten cohorts as shown below. Not shown in the table below are cohorts 6 (56 - 70 years old, 250 µg mRNA-1273), 9 ( $\geq 71$  years old, 250 µg mRNA-1273), and 13 (18 - 55 years old, 10 µg mRNA-1273), which the study team decided not to enroll; these cohorts would have enrolled an additional 10, 10, and 15 subjects, respectively. Subjects received an IM injection of mRNA-1273 on Days 1 and 29 in the deltoid and will be followed through 1-year post 2<sup>nd</sup> vaccination (Day 394). The second dose of vaccine (0.5 mL) was administered, with a preference for administration in the same arm used for the first dose. Follow up visits are scheduled to occur 1, 2, and 4 weeks after each vaccination (Days 8, 15, 29, 36, 43, and 57), as well as 3 months, 6 months and 12 months after 2<sup>nd</sup> vaccination (Days 119, 209, and 394). Safety endpoints will be assessed at these visits as well as blood drawn for immunogenicity assays. Additional safety and reactogenicity data will be solicited via phone calls to subjects 1 and 2 days post each vaccination (Days 2, 3, 30, and 31).

To determine early safety signals for this Phase 1 study, vaccination proceeded in a staged fashion. Sentinel subject dosing began with four subjects in cohort 1 (25 mcg). The four sentinel subjects for cohort 2 (100 mcg) were enrolled no earlier than one day after enrollment of the last of the four sentinel subjects in cohort 1. When no halting rules were met for these eight sentinel subjects after Day 5, then full enrollment proceeded first with the remaining subjects in cohort 1, followed by the remaining subjects in cohort 2, without interruption. When no halting rules were met after all subjects in cohort 2 completed Day 8, dosing of four sentinel subjects began in cohort 3. When no halting rules were met after Day 5, then full enrollment of cohort 3 proceeded.

When no halting rules were met after all subjects in cohorts 1 and 2 completed Day 8, dosing began for cohorts 4 (25 mcg; 56-70 years of age) and 5 (100 mcg; 56-70 years of age). When no halting rules were met after all subjects in cohorts 4 and 5 had completed Day 8, dosing began for cohorts 7 (25 mcg;  $\geq 71$  years of age) and 8 (100 mcg;  $\geq 71$  years of age). Subjects were enrolled simultaneously in cohorts 10-12; there was no staging.

### **Vaccination Arms**

| <b>Cohort</b> | <b>Sample Size</b> | <b>Age</b> | <b>First and Second Dose</b> |
|---------------|--------------------|------------|------------------------------|
| 1             | 15                 | 18-55      | 25 µg mRNA-1273              |
| 2             | 15                 | 18-55      | 100 µg mRNA-1273             |
| 3             | 15                 | 18-55      | 250 µg mRNA-1273             |
| 4             | 10                 | 56-70      | 25 µg mRNA-1273              |
| 5             | 10                 | 56-70      | 100 µg mRNA-1273             |
| 7             | 10                 | $\geq 71$  | 25 µg mRNA-1273              |
| 8             | 10                 | $\geq 71$  | 100 µg mRNA-1273             |
| 10            | 15                 | 18-55      | 50 µg mRNA-1273              |
| 11            | 10                 | 56-70      | 50 µg mRNA-1273              |

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

|    |    |           |                 |
|----|----|-----------|-----------------|
| 12 | 10 | $\geq 71$ | 50 µg mRNA-1273 |
|----|----|-----------|-----------------|

*Note:* Cohorts 6, 9, and 13 were not enrolled as decided by the study team and therefore are not included.

On vaccination days, all females of childbearing potential had a urine pregnancy test done. All subjects had vital signs measured and a physical examination pre-vaccination. Blood was collected pre-vaccination for immunogenicity testing. On vaccination days, clinical safety laboratory tests were collected pre-vaccination. Vaccine was then administered by intramuscular injection.

Subjects were observed for at least 60 minutes after the injection was given. Reactogenicity was measured by the occurrence of solicited injection site and systemic AEs. Subjects maintained a memory aid through 7 days post each vaccination recording temperature, solicited local and systemic symptoms. Unsolicited non-serious AEs were collected from the time of first study vaccination through approximately 28 days after the last vaccination. From Day 57 through completion of study participation, only SAEs, MAAEs, and NOCMCs will be recorded as AEs in the study database. Clinical safety labs will be collected on Days 1, 8, 29 and 36.

Evaluation of immunogenicity will include quantitation of antibodies to the SARS-CoV-2 S protein at multiple timepoints following each study vaccination as measured by ELISA, pseudovirus and live virus neutralization assays, PRNT, FRNT and nLuc. In addition, exploratory studies to characterize cell mediated immune responses are planned. Venous blood will also be collected at multiple time points following study vaccination for the secondary research use of serum, plasma and peripheral blood mononuclear cells (PBMCs).

#### 4. METHODS FOR SAFETY ASSESSMENTS

A summary of the procedures for vaccination and follow-up of the study cohort is provided in the protocol.

Brief descriptions of the collection and protocol definitions of adverse events, serious adverse events, and the grading scales for solicited events, clinical laboratory results, and vital signs are excerpted from the protocol (Version 4.0, 20 May 2020) and included in [Appendix A](#).

#### 5. REVIEW OF THE SAFETY DATA

##### 5.1 Overview

The safety data presented in this report focus on both solicited and unsolicited events experienced following product administration. Adverse events are reported to the staff at Kaiser Permanente Washington Health Research Institute, Emory Children's Center, Hope Clinic of the Emory Vaccine Center, and Vaccine Research Center.

The report includes the available safety data from subjects who received study product with data entered into the study database as of the data cutoff date of October 7, 2020. The monitoring of the data collected to date remains ongoing. The data are not considered clean.

## 5.2 Study Status

Enrollment was initiated on 16 March 2020. As of the data cutoff date for this report, 120 subjects have been enrolled, 120 subjects had received the first dose of vaccine and 116 subjects had received 2 doses of vaccine. Two hundred fifty six potential subjects were screened to accrue this number, for an overall screening failure rate of 53%. Thirty six subjects were found to be eligible but were not enrolled; these are considered screen failures for the purposes of this report. The most common reasons for screening failure were screening laboratory evaluations are not within acceptable normal ranges (41%), Systolic BP is not within the allowable range of 85 to 150 mmHg, inclusive (8%), and has any medical disease or condition that precludes study participation (4%).

**Tables 2A-2F** present demographic characteristics (sex, ethnicity, race, and age) of the subjects enrolled in the study who have received study product.

Of the 60 subjects enrolled into the 18-55 years of age cohorts, 52 (87%) reported their ethnicity as not Hispanic or Latino; 53 (88%) subjects reported their race as White, 3 (5%) subjects reported their race as Asian, 2 (3%) subjects reported their race as Black, 1 (2%) subject reported their race as American Indian or Alaska Native, and 1 (2%) subject reported their race as Unknown. The mean age in the 18-55 years of age cohorts is 34.0 years and the range is 18 to 54 years; the mean BMI is 24.79 kg/m<sup>2</sup> and the range is 18.5 to 32.6 kg/m<sup>2</sup>.

Of the 30 subjects enrolled into the 56-70 years of age cohorts, 30 (100%) reported their ethnicity as not Hispanic or Latino; 27 (90%) subjects reported their race as White, 1 (3%) subject reported their race as Asian, 1 (3%) subject reported their race as Black, and 1 (3%) subject reported their race as Multi Racial. The mean age in the 56-70 years of age cohorts is 63.9 years and the range is 56 to 70 years; the mean BMI is 24.17 kg/m<sup>2</sup> and the range is 20.8 to 29.5 kg/m<sup>2</sup>.

Of the 30 subjects enrolled into the ≥71 years of age cohorts, 28 (93%) reported their ethnicity as not Hispanic or Latino; 29 (97%) subjects reported their race as White, and 1 (3%) subject reported their race as Asian. The mean age in the ≥71 years of age cohorts is 73.5 years and the range is 71 to 83 years; the mean BMI is 25.15 kg/m<sup>2</sup> and the range is 19.9 to 29.7 kg/m<sup>2</sup>.

**Table 2G** shows the percentage of subjects in each vaccination group that have completed the study milestones and **Tables 2H-2J** display subject disposition. A total of 256 subjects were screened, and 120 were enrolled and 120 received treatment. 120/120 (100%) subjects have completed the Day 57 visit and 116/120 (97%) have completed the Day 119 visit. As of the data cutoff, four subjects discontinued treatment on the study; three of those subjects discontinued due

to an AE (Hives on Lower Extremities, Sore Throat, and Maculopapular Rash), the other subject discontinued treatment due to potential COVID-19 exposure.

For a listing of subjects who have discontinued treatment and subjects who have terminated early from the study, see [Table 2K](#).

### 5.3 Halting Rules Surveillance

The status of the study Halting Rules is summarized in [Table 1](#).

**TABLE 1: Study Halting Rules**

| Halting Rule # | Halting Rule Description   | Number of Subjects n (%) |
|----------------|--|--------------------------|
| 1              | Any subject experiences an SAE after administration of the vaccine that is considered related to vaccine.  | 0 (0)                    |
| 2              | Any subject experiences laryngospasm, bronchospasm or anaphylaxis within 24 hours after administration of vaccine that is considered related to vaccine.   | 0 (0)                    |
| 3              | Any subject experiences ulceration, abscess or necrosis at the injection site that is considered related to vaccine administration.  | 0 (0)                    |
| 4              | Two (2) or more subjects experience an allergic reaction such as generalized urticaria (defined as occurring at three or more body parts) within 72 hours after administration of vaccine that is considered related to vaccine.   | 0 (0)                    |
| 5              | Three (3) or more subjects experience a Grade 3 AE (systemic and/or clinical laboratory abnormality), in the same Preferred Terms based on the Medical Dictionary for Regulatory Activities (MedDRA) coding, that lasted at least 48 hours after administration of the vaccine and is considered related to the vaccine. Clinical laboratory abnormalities are not subject to the time window. | 1 (0.8%)                 |
| 6              | Additionally, any AE for which the investigator checks the box for "In the opinion of the site investigator, this event should be evaluated for possible contribution toward the halting criteria for the group, cohort, or study" will trigger an automatic email from the EDC, even if it does not meet any of the requirements in the table above.  | 1 (0.8%)                 |

**NOTE:** No halting criteria have been met as of October 7, 2020.

One subject had a severe lipase value reported, which was determined to be related to study treatment, therefore meeting 1 of the 3 needed to halt the study per Halting Rule #1 in [Table 1](#) above.

One subject reported moderate abdominal discomfort which was initially determined to be related to the study treatment and which, in the opinion of the site investigator, was to be evaluated for possible contribution toward the halting criteria. Upon further discussions with the subject and the subject's primary care physician, it was determined that this was not related to the study treatment, but was a medically attended adverse event (MAAE) consistent with acute pancreatitis, related to

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

dietary intake. Therefore, this did not meet study halting criteria. These updates will be made in the study database and will be reflected in subsequent safety reports.

Details of reported serious adverse events, if any, are included in [Table 3A](#).

## 5.4 Adverse Events

Details of reported serious adverse events, medically attended adverse events (MAAEs), and new onset chronic medical conditions, if any, are included in [Table 3A and 3B](#). Thirty three MAAEs have been reported in 24 subjects as of data cutoff. One subject (6%) in the 18-55 years of age cohort that received the 250 mcg dose reported 4 MAAEs after receiving one dose of the investigational product, with one in the Respiratory, thoracic and mediastinal disorders SOC, one in the Gastrointestinal disorders SOC, one in the Infections and infestations SOC, and one in the Reproductive system and breast disorders SOC. One subject (6%) in the 56-70 years of age cohort that received the 100 mcg dose reported 3 MAAEs after receiving one dose of the investigational product, with one in the Infections and infestations MedDRA® System Organ Class (SOC), and two in the Skin and subcutaneous tissue disorders SOC. Four other subjects each experienced 2 separate MAAEs. One subject in the 18-55 years of age cohort that received the 250 mcg dose reported 1 MAAE in the Gastrointestinal disorders SOC that was initially determined to be related to study product; this was the same subject noted in Section 5.3 above that experienced abdominal discomfort. As noted above, after further discussion, this was determined to not be related to study treatment and will be reflected in subsequent reports. Therefore, all 33 (100%) MAAEs were assessed to be not related to the study product.

[Tables 4A-4I](#) summarize all unsolicited adverse events reported for subjects as of the data cutoff date. [Tables 4A, 4B, and 4C](#) classify each event in terms of MedDRA® System Organ Class (SOC), severity, and relationship to vaccination. [Tables 4D-4I](#) classify the events by MedDRA® SOC, Preferred Term (PT), relationship to vaccination, and severity. [Figure 1A-C](#) is a graphical representation of the number and severity of all unsolicited adverse events by System Organ Class. [Appendix B](#) is a listing of all unsolicited events grouped by cohort and dose number.

At the time of data cutoff, in the 18-55 years of age cohorts, 44 subjects (73%) had reported 123 unsolicited adverse events. Ninety four (76%) of the events were determined to be mild (Grade 1) severity, twenty seven (22%), were determined to be moderate (Grade 2) severity, and two (2%) were determined to be severe (Grade 3) severity; 41 (33%) of the events were determined to be related to study product, and 82 (67%) were determined to be not related to study product. One incidence of mild lymphadenopathy was reported in the Blood and lymphatic system disorders SOC. Five events were reported within the Cardiac Disorders SOC, with all reported as mild Bradycardia. One mild incidence of vertigo was reported in the Ear and labyrinth disorders SOC. Two events were reported within the Eye Disorder SOC, including one incidence of mild eye irritation and one incidence of mild Scintillating scotoma. Seventeen events were reported within

the Gastrointestinal SOC, including 2 incidences of abdominal discomfort (1 mild and 1 moderate), 2 incidences of moderate abdominal pain, 1 incidence of mild abdominal pain upper, 1 incidence of mild anal fissure, 1 incidence of moderate diarrhoea, 2 incidences of mild dyspepsia, 1 incidence of mild faeces discoloured, 1 incidence of mild flatulence, 1 incidence of mild lip disorder, 1 incidence of moderate tooth impacted, and 4 incidences of vomiting (2 mild and 2 moderate). Twenty one events were reported within the General Disorders and Administration site SOC, including 1 incidence of mild fatigue, 1 incidence of moderate feeling jittery, 3 incidences of mild injection site bruising, 2 incidences of injection site erythema (1 mild and 1 moderate), 1 incidence of mild injection site irritation, 4 incidences of mild injection site pruritus, 1 incidence of moderate Malaise, 1 incidence of mild vaccination site movement impairment, 6 incidences of mild vessel puncture site bruise, and 1 incidence of mild vessel puncture site haemorrhage. One event was reported in the Immune system disorders SOC (mild seasonal allergy). Seven events were reported within the Infections and infestations SOC, including 1 incidence of moderate epididymitis, 1 incidence of moderate gastroenteritis, 1 incidence of moderate hordeolum, 1 incidence of moderate infected cyst, 1 incidence of mild pustule, 1 incidence of mild upper respiratory tract infection, and one incidence of mild urinary tract infection. Thirteen events were reported within the Injury, Poisoning and Procedural Complications SOC, including 3 incidences of mild contusion, 4 incidences of muscle strain (3 mild and 1 moderate), 3 incidences of mild skin abrasion, 1 incidence of mild skin laceration, 1 incidence of mild thermal burn, and 1 incidence of mild wound. Two events were reported within the Investigations SOC, including 1 incidence of mild blood glucose decreased, and 1 incidence of mild heart rate increased. Six events were reported in the Metabolism and nutrition disorders, including 5 incidences of decreased appetite (3 mild and 2 moderate), and 1 moderate hypoglycaemia. Nine events were reported in the Musculoskeletal and connective tissue disorders, including 1 incidence of mild arthralgia, 2 incidences of muscle spasm (1 mild and 1 moderate), 1 incidence of moderate muscle strain, 1 incidence of mild muscular weakness, 1 incidence of mild myalgia, 1 incidence of mild neck pain, 1 incidence of mild pain in extremity, and 1 incidence of mild pain in jaw. Eight events were reported within the Nervous System Disorders SOC, including 2 incidences of dizziness (1 mild and 1 severe), 4 incidences of headache (1 mild and 3 moderate), 1 incidence of mild presyncope and 1 incidence of severe syncope. Three events were reported in the Psychiatric disorders SOC, including 1 incidence of mild anxiety, 1 incidence of moderate attention deficit hyperactivity disorder, and 1 incidence of mild insomnia. Four events were reported in the Reproductive system and breast disorder SOC, including 1 incidence of mild breast pain, 1 incidence of mild vaginal haemorrhage and 2 incidences of mild vulvovaginal pruritis. Twelve events were reported within the Respiratory, Thoracic and Mediastinal Disorder SOC, including 1 incidence of mild diaphragmatic spasm, 1 incidence of mild dyspnea exertional, 3 incidences of nasal congestion (2 mild and 1 moderate), 5 incidences of mild oropharyngeal pain, and 2 incidences of mild upper airway cough syndrome. Seven events were reported within the Skin and Subcutaneous tissue disorder SOC, including 1 incidence of mild dermatitis contact, 1 incidence of mild erythema, 1 incidence of moderate hyperhidrosis, 1 incidence of moderate night sweats, 1 incidence of mild petechiae, 1 incidence of

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

mild rash, and 1 incidence of mild urticaria. Four events were reported within the Vascular Disorders SOC, including 1 incidence of mild hypertension, 1 incidence of mild hypotension, 1 incidence of mild systolic hypertension and 1 incidence of mild vasodilation.

At the time of data cutoff, in the 56-70 years of age cohorts, 22 subjects (73%) had reported 32 unsolicited adverse events. Seventeen (53%) of the events were determined to be mild (Grade 1) severity, thirteen (41%), were determined to be moderate (Grade 2) severity, and two (6%) were determined to be severe (Grade 3) severity; 4 (13%) of the events were determined to be related to study product, and 28 (88%) were determined to be not related to study product. Two events were reported within the Cardiac disorder SOC, two incidences of mild bradycardia. One event was reported within the Ear and labyrinth disorder SOC, one incidence of mild vertigo; two events were reported in the Gastrointestinal disorders SOC, including 1 incidences of moderate abdominal discomfort and 1 incidence of mild haemorrhoids; two events were reported within the General Disorders and Administration site SOC, 2 incidences of mild injection site bruising. Four events were reported within the Infections and infestations SOC, including 1 incidence of moderate onychomycosis, 1 incidence of moderate paronychia, 1 incidence of moderate urinary tract infection, and 1 incidence of severe viral infection. Six events were reported within the Injury, poisoning and procedural Complications SOC, including 1 incidence of mild arthropod sting, 1 incidence of moderate exposure via inhalation, 1 incidence of moderate limb injury, one incidence of mild muscle strain, 1 incidence of mild skin laceration, and 1 incidence of moderate tooth fracture. One incidence of moderate bone density decreased was reported within the Investigations SOC. Two events were reported in the Metabolism and nutrition disorders, including 1 incidence of moderate decreased appetite, and 1 severe hypoglycaemia. One event was reported in the Musculoskeletal and connective tissue disorders SOC, which was 1 mild incidence of pain in extremity. Four events were reported within the Nervous System Disorders SOC, including 1 incidence of mild dizziness, 1 incidence of mild headache and 2 incidences of sciatica (1 mild and 1 moderate). One event was reported in the Psychiatric disorders SOC, including 1 incidence of mild insomnia. Three events were reported within the Respiratory, thoracic and mediastinal Disorder SOC, including 1 incidence of moderate nasal congestion and 2 incidences of mild oropharyngeal pain. Two events were reported within the Skin and Subcutaneous tissue disorder SOC, including 1 incidence of moderate dermatitis contact and 1 incidence of moderate rash maculo-papular. One event was reported within the Vascular Disorders SOC, 1 incidence of mild systolic hypertension.

At the time of data cutoff, in the 71 years of age and over cohorts, 23 subjects (77%) had reported 59 unsolicited adverse events. Fifty seven (97%) of the events were determined to be mild (Grade 1) severity and two (3%) were determined to be moderate (Grade 2) severity; 14 (24%) of the events were determined to be related to study product, and 45 (76%) were determined to be not related to study product. Two events were reported within the Cardiac disorder SOC, two incidences of mild bradycardia. Twelve events were reported within the General Disorders and Administration site SOC, including 2 incidences of mild increased energy, 1 incidence of mild

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

fatigue, 3 incidences of mild injection site bruising, 1 incidence of mild injection site erythema, 1 incidence of mild injection site pruritis, and 4 incidences of mild vessel puncture site bruise. Two events were reported in the Infections and infestations SOC; 1 incidence of mild pustule and 1 incidence of mild urinary tract infection. Eighteen events were reported within the Injury, poisoning and procedural Complications SOC, including 2 incidences of mild arthropod bite, 3 incidences of mild contusion, 2 incidences of mild injury, 1 incidence of mild limb injury, 1 incidence of mild procedural pain, 6 incidences of mild skin abrasion, 1 incidence of mild sunburn, 1 incidence of mild thermal burn, and 1 incidence of mild tooth fracture. Five events were reported in the Musculoskeletal and connective tissue disorders, including 1 incidence of moderate arthritis, 1 incidence of mild joint swelling, 1 incidence of mild muscle tightness, 1 incidence of moderate musculoskeletal chest pain, and 1 incidence of mild myalgia. One event was reported in the Neoplasms benign, malignant and unspecified (incl cysts and polyps) SOC, which was 1 incidence of mild squamous cell carcinoma. Four events were reported within the Nervous System Disorders SOC, including 3 incidences of mild dizziness and 1 incidence of mild visual field defect. Three events were reported in the Psychiatric disorders SOC, including 1 incidence of mild anxiety and 2 incidences of mild sleep disorder. One event was reported in the Respiratory, thoracic, and mediastinal disorders SOC, including 1 incidence of mild oropharyngeal pain. Eight events were reported within the Skin and Subcutaneous tissue disorder SOC, including 1 incidence of mild blister, 1 incidence of mild dermatitis, 1 incidence of mild dermatitis contact, 2 incidences of mild night sweat, 1 incidence of mild pruritus, 1 incidence of mild rash, and 1 incidence of mild skin irritation. Three events were reported in the Vascular disorders SOC, including 2 incidences of mild hypertension, and 1 incidence of mild systolic hypertension.

Refer to [Appendix B](#) for a detailed listing of moderate and severe non-serious, unsolicited, adverse events.

## 5.5 Solicited Events and Symptoms

Solicited events data, collected in-clinic pre-vaccination, post-vaccination and via memory aid through 7 days after vaccination, are summarized by symptom in [Figure 2A\(i, ii\)](#)-[2C\(i, ii\)](#) and [Table 5A\(i, ii, iii\)](#)-[5C\(i, ii, iii\)](#), which report the maximum severity experienced by each subject over the 7-day post-vaccination reporting period, separated by Dose 1 and Dose 2.

[Figures 3A\(i, ii, iii\)](#) and [4A\(i, ii, iii\)](#) summarize the solicited event data across all vaccination groups and display the maximum severity experienced by each subject post-vaccination and on each day for all systemic and all local symptoms, respectively.

The graphical summaries of solicited events included in this report convey the number of subjects who experienced a maximum severity of mild ([yellow](#)), moderate ([orange](#)), or severe ([red](#)) during the post-vaccination period.

**Figures 5A(i, ii, iii)-5L(i, ii, iii)** display subjects who experienced a mild, moderate, or severe event for each symptom for each day post-vaccination, separated by Dose 1 and Dose 2.

Thirty-five (58.3%) subjects in the 18-55 age group reported experiencing a maximum mild/grade 1 solicited local event for at least one day, 18 (30%) subjects experienced a maximum moderate/grade 2 solicited local event for at least one day, and 2 (3.3%) subjects experienced a maximum severe/grade 3 event for at least one day. Post any vaccination, 11 (18.3%) subjects reported experiencing a maximum of mild erythema/redness. Nine (15%) subjects reported experiencing a maximum of mild induration/swelling with 1 (1.7%) subject experiencing a maximum of moderate induration/swelling. Thirty-eight (63.3%) subjects reported experiencing a maximum of mild injection site pain with 17 (28.3%) experiencing a maximum of moderate injection site pain.

Fifteen (25%) subjects in the 18-55 age group reported experiencing a maximum mild/grade 1 solicited systemic event for at least one day, 32 (53.3%) subjects experienced a maximum moderate/grade 2 solicited systemic event for at least one day, and 4 (6.7%) subjects experienced a maximum severe/grade 3 event for at least one day. Post any vaccination, 7 (11.7%) subjects reported experiencing a maximum of mild arthralgia, and 8 (13.3%) subjects reporting a maximum of moderate arthralgia. 15 (25%) subjects reported experiencing a maximum of mild fatigue, 22 (36.7%) subjects reported experiencing a maximum of moderate fatigue, and 2 (3.3%) subjects experiencing a maximum of severe fatigue. Eleven (18.3%) subjects reported experiencing a maximum of mild fever, 3 (5%) subjects reported experiencing a maximum of moderate fever, and 1 (1.7%), subject experienced a maximum of severe fever. Fifteen (25%) subjects reported experiencing a maximum of mild feverishness, 10 (16.7%) subjects reported experiencing a maximum of moderate feverishness, and 3 (5%), subjects experienced a maximum of severe feverishness. Twenty-four (40%) subjects reported experiencing a maximum of mild headache, 13 (21.7%) subjects reported experiencing a maximum of moderate headache, and 2 (3.3%) subjects experienced a maximum of severe headache. Twelve (20%) subjects reported experiencing a maximum of mild myalgia, 18 (30%) subjects reported experiencing a maximum of moderate myalgia, and 1 (1.7%) subject experienced a maximum of severe myalgia. Nine (15%) subjects reported experiencing a maximum of mild nausea, 5 (8.3%) subjects reported experiencing a maximum of moderate nausea, and 1 (1.7%) subject experienced a maximum of severe nausea.

Nineteen (63.3%) subjects in the 56-70 age group reported experiencing a maximum mild/grade 1 solicited local event for at least one day, 6 (20%) subjects experienced a maximum moderate/grade 2 solicited local event for at least one day, and 1 (3.3%) subject experienced a maximum severe/grade 3 solicited local event for at least one day. Post any vaccination, 4 (13.3%) subjects reported experiencing a maximum of mild erythema/redness, and 1 (3.3%) subject reported experiencing a maximum of severe erythema/redness. Seven (23.3%) subjects reported experiencing a maximum of mild induration/swelling, and 4 (13.3%) subjects reported experiencing a maximum of moderate induration/swelling. Twenty-one (70%) subjects reported

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

experiencing a maximum of mild injection site pain, and 3 (10%) subjects experienced a maximum of moderate injection site pain.

Eleven (36.7%) subjects in the 56-70 age group reported experiencing a maximum mild/grade 1 solicited systemic event for at least one day, 10 (33.3%) subjects experienced a maximum moderate/grade 2 solicited systemic event for at least one day, and 1 (3.3%) subject experienced a maximum severe/grade 3 event for at least one day. Post any vaccination, 3 (10%) subjects reported experiencing a maximum of mild arthralgia, and 4 (13.3%) subjects reported a maximum of moderate arthralgia. Eight (26.7%) subjects reported experiencing a maximum of mild fatigue, and 8 (26.7%) subjects reported experiencing a maximum of moderate fatigue. Two (6.7%) subjects reported experiencing a maximum of mild fever and 1 (3.4%) subject reported experiencing a maximum of severe fever. Five (16.7%) subjects reported experiencing a maximum of mild feverishness, and 4 (13.3%) subjects reported experiencing a maximum of moderate feverishness. Twelve (40%) subjects reported experiencing a maximum of mild headache, and 2 (6.7%) subjects reported experiencing a maximum of moderate headache. Eleven (36.7%) subjects reported experiencing a maximum of mild myalgia, and 5 (16.7%) subjects reported experiencing a maximum of moderate myalgia. Five (16.7%) subjects reported experiencing a maximum of mild nausea, and 3 (10%) subjects reported experiencing a maximum of moderate nausea.

Nineteen (63.3%) subjects in the 71+ age group reported experiencing a maximum mild/grade 1 solicited local event for at least one day, 6 (20%) subjects reported experiencing a maximum moderate/grade 2 solicited local event for at least one day. Post any dose, 8 (26.75%) subjects reported experiencing a maximum of mild erythema/redness. Seven (23.3%) subjects reported experiencing a maximum of mild induration/swelling. Twenty-four (80%) subjects reported experiencing a maximum of mild injection site pain, and 1 (3.3%) subject reported experiencing a maximum of moderate injection site pain.

Twelve (40%) subjects in the 71+ age group reported experiencing a maximum mild/grade 1 solicited systemic event for at least one day, 5 (16.7%) subjects reported experiencing a maximum moderate/grade 2 solicited systemic event for at least one day, and 1 (3.3%) subject reported experiencing a maximum severe/grade 3 solicited systemic event for at least one day. Post dose 1, 4 (13.3%) subjects reported experiencing a maximum of mild arthralgia. Nine (30%) subjects reported experiencing a maximum of mild fatigue, 5 (16.7%) subjects reported experiencing a maximum of moderate fatigue, and 1 (3.3%) subject reported experiencing a maximum of severe fatigue. One (3.3%) subject reported experiencing a maximum of mild fever. Four (13.3%) subjects reported experiencing a maximum of mild feverishness, and 1 (3.3%) subject reported experiencing a maximum of moderate feverishness. Eight (26.7%) subjects reported experiencing a maximum of mild headache, and 1 (3.3%) subject reported experiencing a maximum of moderate headache. Ten (33.3%) subjects reported experiencing a maximum of mild myalgia, and 1 (3.3%) subject reported experiencing a maximum of moderate myalgia. One (3.3%) subject reported experiencing a maximum of mild nausea.

A listing of systemic and local solicited events is provided in [Appendix C1-C2](#). The listing is limited to subjects who experienced a symptom of moderate or greater severity on at least one occasion.

[Appendix D](#) is a listing of all severe systemic solicited events contributing to halting criteria along with their attributions.

## 5.6 Clinical Laboratory Results and Vital Signs

[Tables 6A-6K](#) summarize the results of the scheduled hematology and chemistry clinical laboratory parameters conducted at the protocol specified visits. [Figure 6A-C](#) displays abnormal results by laboratory parameter and severity and takes into account all values reported after vaccination (scheduled and supplemental).

[Appendix E](#) includes listings of clinical laboratory results for subjects who experience abnormal hematology and chemistry results at any time post-vaccination.

Forty-nine (82%) subjects in the 18-55 age group experienced a maximum mild/grade 1 abnormal hematology result post-vaccination, and 6 (10%) subjects experienced a maximum moderate/grade 2 abnormal hematology result post-vaccination. Forty-eight (80%) subjects experienced a maximum mild abnormal hemoglobin result and 6 (10%) of subjects experienced a maximum moderate abnormal hemoglobin result. Seven (12%) subjects experienced mild leukopenia.

Twenty-six (87%) subjects in the 56-70 age group experienced a maximum mild/grade 1 abnormal hematology result post-vaccination, 2 (7%) subjects experienced a maximum moderate/grade 2 abnormal hematology result post-vaccination, and 2 (7%) subjects experienced a maximum severe/grade 3 abnormal hematology result post-vaccination. Twenty-six (87%) subjects in the 56-70 age group experienced a maximum mild abnormal hemoglobin result, 2 (7%) subjects experienced a maximum moderate abnormal hemoglobin result, and 2 (7%) subjects experienced a maximum severe abnormal hemoglobin result.

Twenty-eight (93%) subjects in the 71+ age group experienced a maximum mild/grade 1 abnormal hematology result post-vaccination. Twenty-seven (90%) subjects experienced a maximum mild abnormal hemoglobin result, 4 (13%) subjects experienced a maximum mild leukopenia result, and 2 (7%) subjects experienced a maximum mild abnormal platelet result.

Seven (23%) subjects in the 18-55 age group experienced a maximum mild/grade 1 abnormal chemistry result post-vaccination, 1 (3%) subject experienced a maximum moderate/grade 2 abnormal chemistry result post-vaccination, and 1 (3%) subject experienced a maximum severe/grade 3 abnormal chemistry result post-vaccination. Three (10%) subjects experienced a maximum mild abnormal alanine aminotransferase result, 1 (3%) subject experienced a maximum mild abnormal aspartate aminotransferase result, 2 (7%) subjects experienced a maximum mild

abnormal bilirubin result and 1 (3%) subject experienced a maximum moderate bilirubin result. One (2%) subject experienced a maximum mild and 1 (3%) subject experienced a maximum severe abnormal serum lipase result.

Two (7%) subjects in the 56-70 age group experienced a maximum mild/grade 1 abnormal chemistry result post-vaccination. One (3%) subject experienced a maximum mild abnormal aspartate aminotransferase result, and 1 (3%) subject experienced a maximum mild abnormal serum lipase result.

Three (10%) subjects in the 71+ age group experienced an abnormal chemistry result post-vaccination. Two (7%) subjects experienced a maximum mild/grade 1 abnormal serum lipase result and 1 (3%) subject experienced a maximum severe/grade 3 abnormal serum lipase result.

**Appendix F** includes a listing of vital signs for subjects who experience abnormal vital signs at any time post-vaccination.

## **5.7 Protocol Adherence**

**Tables 7A-7C** summarizes the protocol deviations for this study by category and type. A full listing of protocol deviations is provided in **Appendix G**.

Among the subjects in the 18-55 years of age cohorts, a total of 32 deviations were reported in 21 subjects. There were 14 deviations reported for too few aliquots obtained, 8 for required procedure done incorrectly, 4 for a visit conducted out of window, 2 for required procedure not conducted, and one deviation each was reported for breach of confidentiality, non-required lab tests performed, safety labs collected out of window, and required procedure done incorrectly.

Among the subjects in the 56-70 years of age cohorts, a total of 4 deviations were reported in 4 subjects. There were 2 deviations reports for too few aliquots obtained, and one deviation each was reported for missed visit/visit not conducted and visit conducted out of window.

Among the subjects in the  $\geq 71$  years of age cohorts, a total of 4 deviations were reported in 4 subjects. There were 3 deviations reported for too few aliquots obtained and one deviation for specimen result not obtained.

There were two non-subject specific protocol deviation reported. One involved a freezer storing the investigational product (IP) was out of range on April 17, 2020. The IP was immediately moved to a different freezer at the site. The study team was alerted of this and the site was instructed to continue use of the IP. The second involved inadvertent disclosure of study participation by one subject to other study subjects via email and was reported by the study site as an unanticipated problem (UP). A total of 3 participants who screened but were not enrolled, and 1 subject who was screened and enrolled, exposed their names and email addresses by using “reply all” to an email

string in which they were blind carbon copied (BCC). Due to an IT glitch at the clinical site, when a study participant, who screened but did not enroll in the study, used "reply all" in an email and included their name and information about their screening status, the email was seen by 9 other study participants, instead of just the sender of the original email. No other information including medical history was disclosed. Two other subjects who screened for the study and 1 who screened and enrolled in the study also replied to the email thread indicating they believed they were included in error. Their names were also disclosed as having screened for the study, however, no other information including medical history was disclosed. All subjects whose names were disclosed and who opened the email were notified of the event and that the event was being reported as a UP.

### **5.8 Pregnancies**

A listing of pregnancies is provided in [Appendix H](#). No pregnancies have been reported as of data cutoff.

## **6. TABLES AND FIGURES**

**TABLE 2A:**

| Note: This table presents number and percentage of subjects. A subject is only counted once per PT and is summarized according to their highest severity and closest relationship. |                       |               |    |          |    |          |    |        |   |                                   |    |         |    |

Severity is the maximum severity reported over all solicited symptoms post dosing for each subject.  
N=All subjects receiving Dose 1 with any solicited event data recorded in the database.

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

Severity is the maximum severity reported over all solicited symptoms post dosing for each subject.

N=All subjects receiving Dose 1 with any solicited event data recorded in the database.

<sup>a</sup>Fever percentages reflect the number of subjects with at least one measurement available in the data system as the denominator. This denominator may differ from other systemic symptoms, which are solicited in-clinic at the post-dose assessment.

Severity is the maximum severity reported over all solicited symptoms post dosing for each subject.

N=All subjects receiving Dose 1 with any solicited event data recorded in the database.

Severity is the maximum severity reported over all solicited symptoms post dosing for each subject.

N=All subjects receiving Dose 1 with any solicited event data recorded in the database.

<sup>a</sup>Fever percentages reflect the number of subjects with at least one measurement available in the data system as the denominator. This denominator may differ from other systemic symptoms, which are solicited in-clinic at the post-dose assessment.

Severity is the maximum severity reported over all solicited symptoms post dosing for each subject.

N=All subjects receiving Dose 1 with any solicited event data recorded in the database.

\*Fever percentages reflect the number of subjects with at least one measurement available in the data system as the denominator. This denominator may differ from other systemic symptoms, which are solicited in-clinic at the post-dose assessment.

Severity is the maximum severity reported over all solicited symptoms post dosing for each subject.

N=All subjects receiving Dose 1 with any solicited event data recorded in the database.

| APPENDIX G2: Listing of Non-Subject Deviations .....  | 934 |
| APPENDIX H: Listing of Pregnancies .....  | 935 |

## APPENDIX A: Adverse Event Definitions

*(Excerpted from Protocol version 4.0, 20 May 2020)*

### **Definition of Adverse Event (AE)**

AEs means any untoward medical occurrence associated with the use of an intervention in humans, whether or not considered intervention-related (21 CFR 312.32 (a)). An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of medicinal (investigational) product.

Any medical condition that is present at the time that the subject is screened will be considered as baseline and not reported as an AE. However, if the severity of any pre-existing medical condition increases, it should be recorded as an AE.

AEs can be further divided into solicited AEs and unsolicited AEs. Solicited AEs are those for which the study team will specifically query the subject whether they occurred. Unsolicited AEs are those events that the subject report occurring without being queried about the specific event.

All AEs will be assessed for severity and relationship to study intervention (see section 8.3.3 of the protocol). Reporting of all AEs, solicited and unsolicited, will occur during the period from study product administration at Day 1 through 28 days after the last vaccination. After Day 57 through the end of study on Day 394, only SAEs, MAAEs, and NOCMCs will be recorded as AEs.

All AEs, solicited and unsolicited, will be captured on the appropriate DCF. Information to be collected for AEs includes event description, date of onset, assessment of severity, relationship to study product and alternate etiology (assessed only by those with the training and authority to make a diagnosis and listed on the Form FDA 1572 as the participating site PI or appropriate sub-investigator), date of resolution, seriousness, and outcome. AEs occurring during the study-collection and reporting period will be documented appropriately regardless of relationship.

AEs will be followed to resolution or stabilization.

**Severity of Adverse Events:** All AEs or SAEs will be assessed for severity, according to the toxicity grading scales in the FDA “Toxicity Grading Scale for Healthy Adult and Adolescent Volunteers Enrolled in Preventive Vaccine Clinical Trials”.

For AEs not included in the protocol-defined grading system, the following guidelines will be used to describe severity.

- **Mild (Grade 1):** Events that are usually transient and may require only minimal or no treatment or therapeutic intervention and generally do not interfere with the subject’s usual activities of daily living.
- **Moderate (Grade 2):** Events that are usually alleviated with additional specific therapeutic intervention. The event interferes with usual activities of daily living, causing discomfort but poses no significant or permanent risk of harm to the research subject.

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

## **Appendix A (continued)** **Adverse Events Definitions**

*(Excerpted from Protocol version 4.0, 20 May 2020)*

- **Severe (Grade 3):** Events interrupt usual activities of daily living, or significantly affects clinical status, or may require intensive therapeutic intervention. Severe events are usually incapacitating.

AEs characterized as intermittent require documentation of onset and duration of each episode. The start and stop date of each reported AE will be recorded on the appropriate DCF. Changes in the severity of an AE will be documented to allow an assessment of the duration of the event at each level of intensity.

**Relationship to Study Intervention:** For each reported adverse reaction, the participating site PI or qualified designee must assess the relationship of the event to the study product using the following guidelines:

- **Related** – The AE is known to occur with the study intervention, there is a reasonable possibility that the study intervention caused the AE, or there is a temporal relationship between the study intervention and event. Reasonable possibility means that there is evidence to suggest a causal relationship between the study intervention and the AE.
- **Not Related** – There is not a reasonable possibility that the administration of the study intervention caused the event, there is no temporal relationship between the study intervention and event onset, or an alternate etiology has been established.

### **Definition of Serious Adverse Event (SAE)**

An SAE is defined in 21 CFR 312.32 as follows: “An AE or suspected adverse reaction is considered serious if, in the view of either the participating site PI or appropriate sub-investigator or the sponsor, it results in any of the following outcomes:

- Death,
- a life-threatening AE,
- inpatient hospitalization or prolongation of existing hospitalization,
- a persistent or significant incapacity or substantial disruption of the ability to conduct normal life functions,
- or a congenital anomaly/birth defect.

Important medical events that may not result in death, be life-threatening, or require hospitalization may be considered serious when, based upon appropriate medical judgment, they may jeopardize the patient or subject and may require medical or surgical intervention to prevent one of the outcomes listed in this definition. Examples of such medical events include allergic bronchospasm requiring intensive treatment in an emergency room or at home, blood dyscrasias or convulsions that do not result in inpatient hospitalization, or the development of drug dependency or drug abuse.

Report Date: 26OCT2020  
Data Cutoff Date: 07OCT2020

**Appendix A (continued)**  
**Adverse Events Definitions**

*(Excerpted from Protocol version 4.0, 20 May 2020)*

“Life-threatening” refers to an AE that at occurrence represents an immediate risk of death to a subject. An event that may cause death if it occurs in a more severe form is not considered life-threatening. Similarly, a hospital admission for an elective procedure is not considered an SAE.

All SAEs, as with any AE, will be assessed for severity and relationship to study intervention.

All SAEs will be recorded on the appropriate SAE DCF.

All SAEs will be followed through resolution or stabilization by a study clinician, licensed to make medical diagnoses and listed on the Form FDA 1572 as the participating site PI or appropriate sub-investigator.

All SAEs will be reviewed and evaluated by DMID and will be sent to the SMC (for periodic review unless related) and IRB/IEC.

**APPENDIX B:**  
**Listing of Non-Serious, Unsolicited, Mild or Moderate, or Severe Adverse Events**

| Adverse Event  | No. of Days Post Associated Vaccination (Duration) | Severity | Relationship to Vaccination | If Not Related, Alternative Etiology                 | Action Taken with Study Vaccination | Subject Discontinued Due to AE | Outcome             | MedDRA® System Organ Class                      | MedDRA® Preferred Term |

| Comments: 7/15/2020 Subject woke at 2am on 7/14/20 after receiving second vaccine on 7/13/20. Her back has a spasm and then she continued to have body aches throughout the night. Took aspirin in the morning, did not work in the morning. Symptoms had resolved by midday and subject resumed normal activities. |  |          |                             |  |                                     |                                |                     |   |                        |
